

I Near doubles

Numbers next to each other are near doubles. Use the double, then add 1.

Example

① $6 + 7$ is a near double.

② Double 6: $6 + 6 = 12$

③ 1 more: $12 + 1 = 13$

$$\boxed{6} + \boxed{7} = \boxed{13}$$

① Look at the towers. Add the double, then 1 more.

$$\boxed{3} + \boxed{3} = \boxed{}$$

$$\boxed{3} + \boxed{4} = \boxed{}$$

$$\boxed{5} + \boxed{5} = \boxed{}$$

$$\boxed{5} + \boxed{6} = \boxed{}$$

$$\boxed{4} + \boxed{4} = \boxed{}$$

$$\boxed{4} + \boxed{5} = \boxed{}$$

$$\boxed{2} + \boxed{2} = \boxed{}$$

$$\boxed{2} + \boxed{3} = \boxed{}$$

② Double the smaller number. Then add 1 more.

$$\boxed{7} + \boxed{8} = \boxed{} + 1 = \boxed{}$$

$$\boxed{8} + \boxed{9} = \boxed{} + 1 = \boxed{}$$

$$\boxed{9} + \boxed{10} = \boxed{} + 1 = \boxed{}$$

$$\boxed{8} + \boxed{7} = \boxed{} + 1 = \boxed{}$$

$$\boxed{2} + \boxed{3} = \boxed{} + 1 = \boxed{}$$

$$\boxed{5} + \boxed{6} = \boxed{} + 1 = \boxed{}$$

$$\boxed{4} + \boxed{5} = \boxed{} + 1 = \boxed{}$$

$$\boxed{3} + \boxed{4} = \boxed{} + 1 = \boxed{}$$

$$\boxed{6} + \boxed{5} = \boxed{} + 1 = \boxed{}$$

$$\boxed{9} + \boxed{8} = \boxed{} + 1 = \boxed{}$$
