

Parts of a flower

Label the flower. Then name each part from its job and number the steps.

1 Label the parts of the flower.

WORD BANK

petal

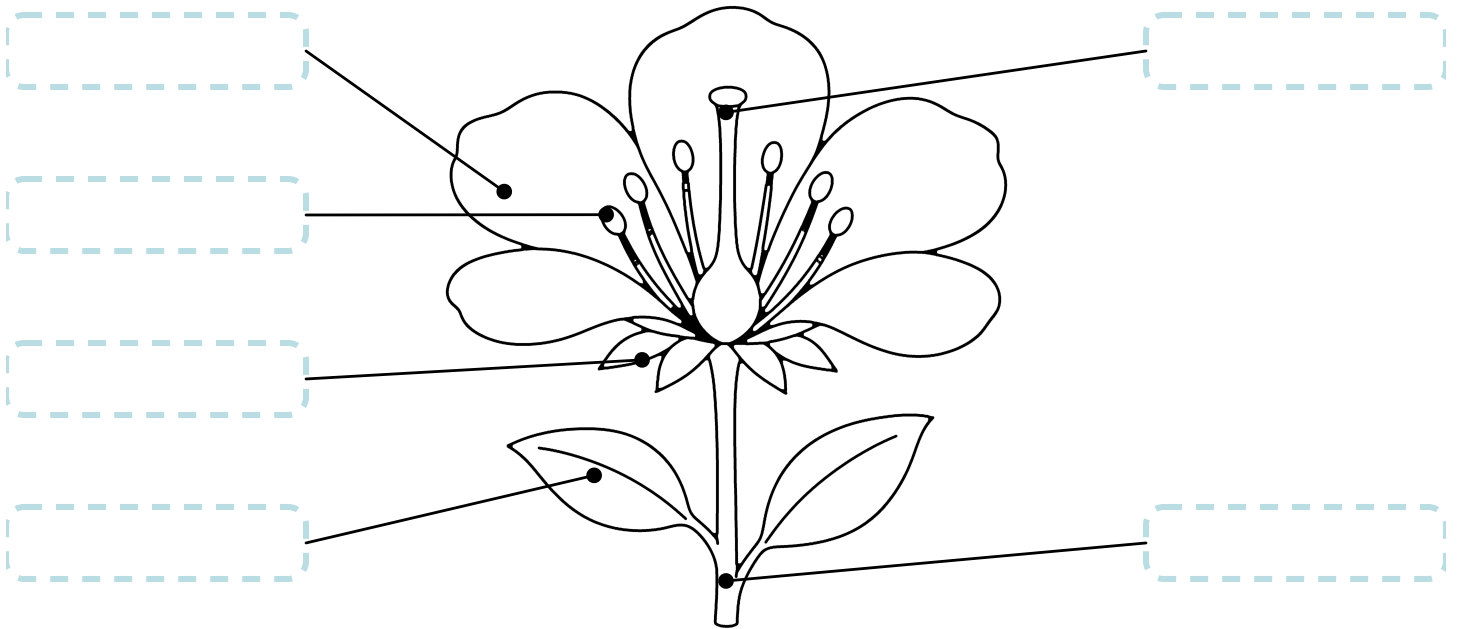

sepal

stamen

pistil

stem

leaf

2 Which part does this job? Write its name.

1. It makes the yellow powder called pollen.
2. Its sticky top catches pollen, and seeds grow at its base.
3. Its bright colour and sweet smell bring bees to the flower.
4. It covered and protected the flower when it was a bud.
5. It holds the flower up and carries water to it.

3 How a bee helps a flower: number the steps 1 to 4.

Pollen sticks to the bee's hairy body.

A bee lands on a flower to drink its sweet nectar.

Seeds start to grow at the base of the pistil.

The bee visits another flower, and pollen rubs off on its sticky pistil.
